

Installation and Operation Instructions for Custom Mark III CP Oil-Fired Unit

Installing and operating your Custom Mark III CP Oil-Fired Unit correctly is crucial for safe and efficient performance. This comprehensive guide provides step-by-step instructions to ensure proper installation, operation, and maintenance.

Installation

1. **Choose a suitable location:** Select a well-ventilated area that meets the manufacturer's specifications for clearance from walls, ceilings, and other equipment.
2. **Prepare the foundation:** Install a level, non-combustible base that can support the weight of the unit.
3. **Position the unit:** Carefully lift the unit onto the foundation and secure it using the provided bolts or brackets.
4. **Connect the oil supply:** Use a flexible oil line to connect the unit to the oil supply. Ensure the line is properly sealed to prevent leaks.
5. **Connect the electrical supply:** Wire the unit according to the manufacturer's instructions, ensuring the correct voltage and amperage.
6. **Connect the exhaust vent:** Install a suitable exhaust vent to remove combustion gases from the unit.

Operation

1. **Fill the fuel tank:** Check the fuel level and fill the tank if necessary.
2. **Prime the oil pump:** Follow the manufacturer's instructions to prime the oil pump and ensure a steady flow of oil to the burner.
3. **Light the burner:** Press the ignition button to light the burner. Adjust the fuel flow and air intake to achieve proper combustion.
4. **Monitor the unit:** Regularly check the fuel level, burner operation, and exhaust vent to ensure safe and efficient operation.
5. **Adjust the thermostat:** Set the thermostat to the desired temperature and the unit will automatically maintain it.

Maintenance

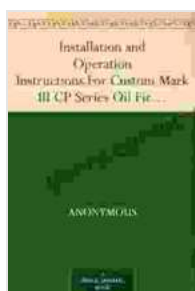

1. **Clean the air filter:** Regularly inspect and clean the air filter to ensure adequate airflow.
2. **Inspect the burner:** Check the burner regularly for any signs of wear or damage. Clean or replace the burner if necessary.
3. **Check the oil lines:** Inspect the oil lines periodically for leaks or damage. Repair or replace damaged lines promptly.
4. **Lubricate the blower motor:** Lubricate the blower motor according to the manufacturer's recommendations.
5. **Have the unit serviced:** It is recommended to have the unit serviced annually by a qualified technician to ensure optimal performance and safety.

Troubleshooting

- **Unit won't start:** Check the power supply, fuel supply, and ignition system.
- **Unit blows cold air:** Check the fuel flow, air intake, and exhaust vent.
- **Unit produces excessive smoke:** Check the fuel quality, air intake, and exhaust vent.
- **Unit leaks oil:** Inspect the oil lines, connections, and seals.
- **Unit makes unusual noises:** Check the blower motor, bearings, and other components.

Safety Precautions

* Always follow the manufacturer's instructions carefully. * Store and handle fuel safely. * Ensure adequate ventilation to prevent carbon monoxide accumulation. * Keep the unit away from flammable materials. * Do not attempt repairs without proper training or experience. * Have the unit inspected and serviced by a qualified technician regularly.
